EXTRUTECH PLASTICS, INC. Announces The Development of a New, Patented, Concrete/Plastic Wall Panel called "ExtruCrete".

MANITOWOC, WI, FEBRUARY 22, 2012 – Extrutech Plastics Inc. has begun production of a new patented plastic panel that self-attaches to concrete as it is being poured. The ExtruCrete panels create a superior sanitary surface that is designed for durability and cleanliness, combining the strength of concrete and the easy-to-clean surface of the Extrutech Poly Board panels. This combination creates a non-porous, pre-finished, pre-cast, structural panel that reduces interior finishing and overall construction costs. The ExtruCrete panel is ideal for pre-cast and tilt-up construction methods.

The ExtruCrete wall panel has a bright white, high gloss, hard surface that brightens the interior of any room. This wall panel will not rot, rust, corrode or delaminate from the concrete. The ExtruCrete is ideal in high moisture areas where sanitation is critical. These waterproof panels resist mold, mildew and bacteria growth and are low maintenance. The ExtruCrete panel has met the ASTM-E84, Class-A standard for low smoke and flame.

The ExtruCrete wall panel is an ideal construction panel for Dairy Barns, Milking Parlors, Cheese Plants, Food Processing Plants, Car and Truck Washes, Water Treatment, Cold Storage, Bottling Plants and Laboratories.

Since 1992, Extrutech has specialized in sanitary and corrosion proof, plastic wall and ceiling panels and plastic doors, which are low-maintenance products. The company is certified ISO 9001-2008 QMS compliant. All Extrutech products are made in the USA. For additional information please call 888-818-0118 or visit our website at www.epiplastics.com.
